

## FACT SHEET #16

### Grain and Hay Feeders

Grain and hay feeders are used for the efficient distribution of feed to your cattle. The grain or hay is put into the feeder and placed in a yard with cattle. The cattle can then help themselves to the feed as needed.

Our feeders are designed to contain the feed up off the ground whilst still allowing full access for the cattle.

Using these feeders can mean significant savings in feed costs by keeping the feed off the ground and out of the elements. This protects the feed from trampling, urine and soiling and keeps it out of the wind, rain and snow.

Let Expo-Trade show you the full range of grain and hay feeders.
